

# GROUP THEORY

**VOL 2**  
by Dr C. D. H. Cooper

**15<sup>th</sup> EDITION July 2022**

These notes were prepared for students at Macquarie University in Australia but are freely available to anyone. However if you make use of them and are not a Macquarie University student it would be nice if you could email me at [christopherdonaldcooper@gmail.com](mailto:christopherdonaldcooper@gmail.com) to let me know where you are from. And, if you are from outside of Australia perhaps you could send me a postcard of where you are from to pin up on my wall (Christopher Cooper, 31 Epping Avenue, EASTWOOD, NSW 2122, Australia).

These notes follow volume 1 and contain some more advanced topics as well as some topics from my own research.

I would like to acknowledge the assistance of Dr Ross Moore, Senior Lecturer at Macquarie University, for pointing out some errors and making some useful suggestions.

# Introduction

A central concept in volume 1 was groups described by presentations. This has become the modern way of looking at groups – at least finitely presented ones. Group presentations can be accepted quite readily at an intuitive level, which is the way they were first introduced. However in this volume I present a more rigorous approach via free groups.

In another chapter I discuss soluble groups and, in particular, power-commutator presentations of soluble groups. This is where a finite group is presented with power relations of the form  $A^n = I$ , for each generator, and  $[A,B]$  is a word in the previous generators. For such groups the group table can be constructed in a much more straight-forward way than the Todd-Coxeter algorithm. I also discuss nilpotent groups and their similarity to abelian groups.

Another chapter, on infinite abelian groups, provides a valuable contrast to this computational flavour and provides an excuse for talking about Zorn's Lemma and the Axiom of Choice.

Other chapters include some esoteric topics from my own research. These include power automorphisms, Sylow subgroups of symmetric groups and properties of class equations.

# CONTENTS

<b>1. CLASSES OF GROUPS</b>	
1.1 Definition and Examples .....	11
1.2 Products of Classes .....	13
1.3 Subnormal Series and Subgroups .....	15
1.4 Closure Operations .....	16
Exercises for Chapter 1 .....	19
Solutions for Chapter 1 .....	20

<b>2. SOLUBLE GROUPS</b>	
2.1 Conjugates and Commutators .....	23
2.2 The Derived Series .....	24
2.3 Soluble Groups .....	26
2.4 Simple Groups .....	28
2.5 The Simplicity of $A_n$ .....	31
2.6 Small Groups are Soluble .....	33
Exercises for Chapter 2 .....	37
Solutions for Chapter 2 .....	38

<b>3. METACYCLIC GROUPS</b>	
3.1 Polycyclic Groups .....	41
3.2 Metacyclic Groups .....	42
3.3 The Structure of Metacyclic Groups .....	44
3.4 Enumerating Metacyclic Groups .....	46
Exercises for Chapter 3 .....	52
Solutions for Chapter 3 .....	52

<b>4. P-C PRESENTATIONS</b>	
4.1 Power-Commutator Presentations .....	55
4.2 P-C Presentations and Soluble Groups .....	60
Exercises for Chapter 4 .....	61
Solutions for Chapter 4 .....	62

<b>5. HALL SUBGROUPS</b>	
5.1 Definition of a Hall Subgroup .....	65
5.2 Hall Subgroups of Finite Soluble Groups .....	66
5.3 Supersoluble Groups .....	84
Exercises for Chapter 5 .....	90
Solutions for Chapter 5 .....	91

<b>6. NILPOTENT GROUPS</b>	
6.1 The Ascending Central Series .....	93
6.2 The Descending Central Series .....	96
6.3 Nilpotent Groups of Class 2 .....	98
6.4 Verbally Abelian Groups .....	99
Exercises for Chapter 6 .....	101
Solutions for Chapter 6 .....	102

<b>7. INFINITE ABELIAN GROUPS</b>	
7.1 Examples of Infinite Abelian Groups .....	105
7.2 The Torsion Subgroup .....	107
7.3 Divisible Groups .....	111
7.4 Truth in Mathematics .....	113
7.5 Zorn's Lemma .....	126
7.6 Divisible Subgroups are Direct Summands	130
7.7 Sylow $p$ -Subgroups .....	136
7.8 The Prüfer Groups .....	136
Exercise for Chapter 7 .....	141
Solutions for Chapter 7 .....	142

<b>8. FREE GROUPS</b>	
8.1 Definition .....	142
8.2 Presentations of Groups .....	151
8.3 Subgroups of Free Groups .....	152
8.4 The Todd-Coxeter Algorithm Revisited .....	163
8.5 Coset Enumeration .....	163
8.6 Subgroups of Finite Index .....	165
Exercises for Chapter 8 .....	168
Solutions for Chapter 8 .....	169

<b>9. AUTOMORPHISMS</b>	
9.1 The Automorphism Group .....	171
9.2 Checking for Automorphisms .....	173
9.3 Complete Groups .....	175
Exercises for Chapter 9 .....	178
Solutions for Chapter 9 .....	179

<b>10. POWER AUTOMORPHISMS</b>	
10.1 Definition .....	181
10.2 Homogeneous and Universal Power Automorphisms .....	183
10.3 Power Automorphisms of Abelian Groups ..	185
10.4 Automorphisms of the Prüfer Groups .....	187
10.5 The Centrality Theorem .....	188
10.6 Hamiltonian Groups .....	193
Exercises for Chapter 10 .....	199
Solutions for Chapter 10 .....	200

<b>11. CLASS EQUATIONS</b>	
11.1 Babylonian Equations .....	203
11.2 Some Elementary Tests for Potential Class Equations .....	207
11.3 The 2N Test .....	210
11.4 The 3N Test .....	212
Exercises for Chapter 11 .....	215
Solutions for Chapter 11 .....	216

<b>12. SYLOW SUBGROUPS OF <math>S_n</math></b>	
12.1 Wreath Products .....	219
12.2 Wreath Products Where the Action is not Specified .....	222
12.3 Sylow Subgroups of Symmetric Groups ...	224
Exercises for Chapter 12 .....	228
Solutions for Chapter 12 .....	228
